

A guide to viewing landscape photos of Aston Rowant NNR

There are many files in the "photos" directory (/ folder). Most of the file names are like sNNpN_date.ext

where "N" is a digit and "ext" is either ".jpg" or ".html".

The files with extension ".jpg" are individual photo files.

The files with extension ".html" show groups of files.

The "sNNpN" parts of the filenames represent a simple coding system in which the "s" number indicates the "station" where the photo(s) were taken from (the location) and the "p" number is the photo number which is related to the compass angle (direction). There is a separate file (probably in the same directory as this note) which contains a table of the locations ("s") and directions (compass angles). The "photos" directory also contains a map of the approximate locations as "map_photo_points.jpg".

The "photos" directory contains a directory called "context_photos" which contains a set of files named like "sNNc_2023date.jpg" which are photos of where the main set of photos were taken from in 2023. These "context" photos may help create a similar set of landscape photos in the future.
