TJH 27-MAR-25

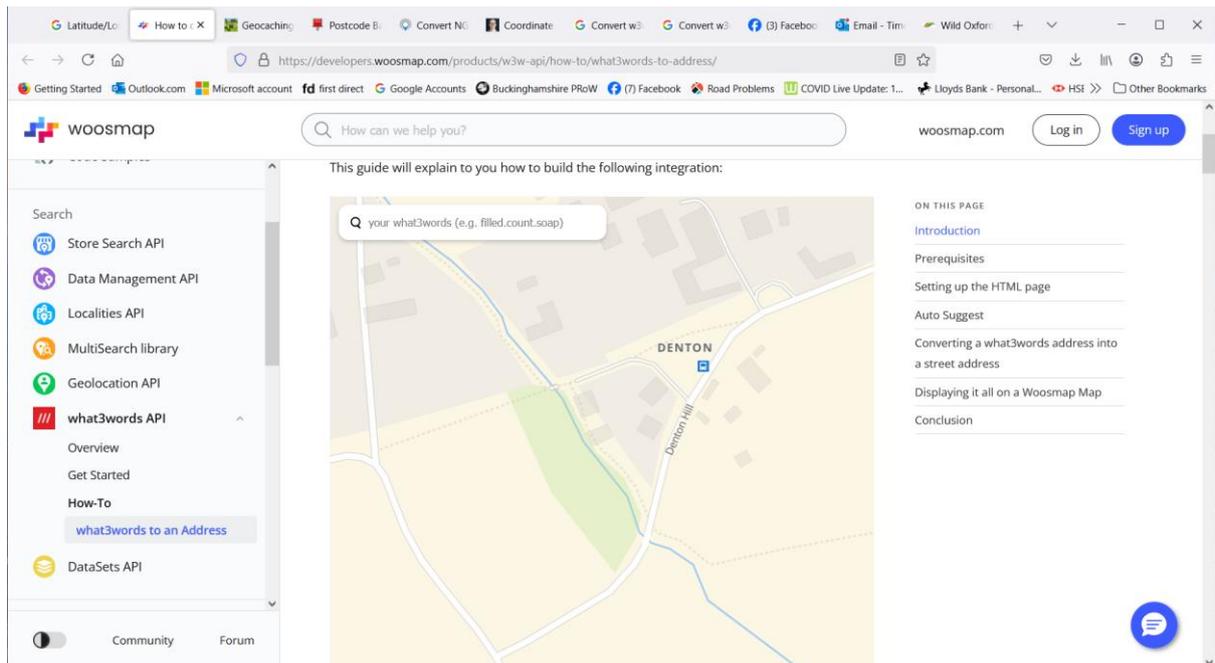

Convert from What3Words to Street Address (incl. PostCode)

There are two-step methods via coordinate systems e.g. National Grid Reference or Latitude/Longitude. I have found one more direct method as shown below.

<https://developers.woosmap.com/products/w3w-api/how-to/what3words-to-address/>

This screenshot shows the Woosmap developer website. The search bar contains the text '///novelists.eggs.probing'. Below the search bar, a dropdown menu displays 'WOOSMAP ADDRESSES RESULTS' with a list of five addresses in Denton, Oxford, each with its corresponding What3Words code (e.g., 'The White Cottage, The Green, Denton, Oxford, OX44 9JE'). The background is a map of Europe with various cities labeled. On the right side, there is a 'ON THIS PAGE' section with a list of links: Introduction, Prerequisites, Setting up the HTML page, Auto Suggest, Converting a what3words address into a street address, Displaying it all on a Woosmap Map, and Conclusion. The left sidebar contains a search bar and a list of API categories, with 'what3words API' selected.

This screenshot shows the same Woosmap developer website, but with a different search query: 'your what3words (e.g., filled.count.soap)'. The search results dropdown is empty. The map now shows a zoomed-in view of the Denton area in Oxford, with 'DENTON' and 'Denton Hill' clearly visible. The 'ON THIS PAGE' section and the left sidebar remain the same as in the previous screenshot.
